Planet Eris and the Global Warming Cristian Negureanu

Dr. Cristian Negureanu brings out another of his outstanding works on the global considerations of human existence - this time it treats a subject of great interest today, namely the global warming of the planet. What is remarkable in his study are the links of the subject to the hypotheses of extraterrestrial interventions on Earth, including the origin of humans and the ancient history of the mankind. The author uses ancient writings (the Bible, the Koran, The Book of Enoch, and the Sumerian writings) as sources containing proofs of the extraterrestrial origin of humans and their links to planet Eris, which seems that it was a sort of station for some categories of extraterrestrials. Combining interpretations of the ancient writings (the book contains a great number of them) with the scientific facts regarding planet Eris, the author proves - and many scientists confirm his observations - that this celestial object is the sole cause of what is happening now on Earth with the climate. What is also interesting - and discussed in the book - is that NASA is aware of this information and has already taken some measures of surveillance of this planet through one of its launched space missions. The real cause of climate changes, volcanic activity, and the intensification of seismic activity is the approach to our solar system of the planet Eris, an intermediary named 2003 - UB - 313, known in Antiquity under various names such as Nibiru, Marduk, Nemesis, Hercolubus, The Gods' Planet, The Planet of the Empire, The Planet of the Cross, or The Red Planet. The planet Eris/Nibiru periodically comes closer to Earth once every 3,600 years and generates numerous climate changes, one being global warming with its natural consequence, the melting of the glaciers. The effect of glaciers melting, because of their sweet water, will be the ending of the thermo-saline natural system, the "engine" that allows the Gulfstream circulation to the North and the freezing of wide areas in northwestern Europe and northeastern United States. Briefly, here is the process that took place during the last two periods during which the Gods' planet has passed between Mars and Jupiter, its nearest point to Earth: - 7,200 years ago, during the cataclysm known as "Noah's flood," sudden changes in temperature, violent storms, and water avalanches from Antarctica broke off from their "ice prison." - 3,600 years ago, during the Jews' Exodus from Egypt in the middle of the second millennium B.C., the Earth suffered major upheavals. A celestial body entered our solar system and came very close to Earth, causing the eventual disappearance of the glacier layer. Now it is time for the planet Eris to pass again through our solar system, and we should expect the same climate changes. The effects of this astronomic event are already being seen worldwide, and they will get more acute in the next years. These are the facts around which the book is developed in a purely informative style, but nourished with biblical passages whose real interpretations are hard to accept initially, but which become quite clear when linked one to another. The book also contains over 80 suggestive photos. It is an enlightening journey through a history of mankind we never think about, which can help us not only to understand what is happening now with the human race, but also even to predict the near future.

From reader reviews:

Sylvia Johnson:

This book untitled Planet Eris and the Global Warming to be one of several books that best seller in this year, this is because when you read this guide you can get a lot of benefit into it. You will easily to buy that book in the book retailer or you can order it via online. The publisher in this book sells the e-book too. It makes you easier to read this book, since you can read this book in your Smart phone. So there is no reason to you to past this book from your list.

Randy Acevedo:

Is it you actually who having spare time subsequently spend it whole day by watching television programs or just lying on the bed? Do you need something totally new? This Planet Eris and the Global Warming can be the solution, oh how comes? A fresh book you know. You are consequently out of date, spending your free time by reading in this completely new era is common not a nerd activity. So what these books have than the others?

Ronald Dotson:

As a pupil exactly feel bored to help reading. If their teacher inquired them to go to the library or make summary for some guide, they are complained. Just small students that has reading's soul or real their pastime. They just do what the professor want, like asked to the library. They go to generally there but nothing reading critically. Any students feel that reading is not important, boring in addition to can't see colorful pictures on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this age, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore , this Planet Eris and the Global Warming can make you really feel more interested to read.

Merle Poteet:

What is your hobby? Have you heard this question when you got students? We believe that that query was given by teacher for their students. Many kinds of hobby, Every person has different hobby. And you know that little person such as reading or as reading become their hobby. You should know that reading is very important and book as to be the point. Book is important thing to add you knowledge, except your own teacher or lecturer. You discover good news or update with regards to something by book. Many kinds of books that can you decide to try be your object. One of them are these claims Planet Eris and the Global Warming.
