Neutron Stars and Pulsars (Astrophysics and Space Science Library)

Neutron Stars and Pulsars (Astrophysics and Space Science Library)

Neutron stars are the most compact astronomical objects in the universe which are accessible by direct observation. Studying neutron stars means studying physics in regimes unattainable in any terrestrial laboratory.

Understanding their observed complex phenomena requires a wide range of scientific disciplines, including the nuclear and condensed matter physics of very dense matter in neutron star interiors, plasma physics and quantum electrodynamics of magnetospheres, and the relativistic magneto-hydrodynamics of electron-positron pulsar winds interacting with some ambient medium. Not to mention the test bed neutron stars provide for general relativity theories, and their importance as potential sources of gravitational waves. It is this variety of disciplines which, among others, makes neutron star research so fascinating, not only for those who have been working in the field for many years but also for students and young scientists.

The aim of this book is to serve as a reference work which not only reviews the progress made since the early days of pulsar astronomy, but especially focuses on questions such as: "What have we learned about the subject and how did we learn it?", "What are the most important open questions in this area?" and "What new tools, telescopes, observations, and calculations are needed to answer these questions?".

All authors who have contributed to this book have devoted a significant part of their scientific careers to exploring the nature of neutron stars and understanding pulsars. Everyone has paid special attention to writing educational comprehensive review articles with the needs of beginners, students and young scientists as potential readers in mind. This book will be a valuable source of information for these groups.

From reader reviews:

Peggy Witzel:

What do you consider book? It is just for students as they are still students or it for all people in the world, what best subject for that? Just simply you can be answered for that issue above. Every person has different personality and hobby for each and every other. Don't to be obligated someone or something that they don't need do that. You must know how great as well as important the book Neutron Stars and Pulsars (Astrophysics and Space Science Library). All type of book would you see on many options. You can look for the internet methods or other social media.

David Waymire:

Reading can called mind hangout, why? Because while you are reading a book mainly book entitled Neutron Stars and Pulsars (Astrophysics and Space Science Library) your brain will drift away trough every dimension, wandering in every single aspect that maybe unidentified for but surely might be your mind friends. Imaging every single word written in a book then become one application form conclusion and explanation which maybe you never get ahead of. The Neutron Stars and Pulsars (Astrophysics and Space Science Library) giving you yet another experience more than blown away the mind but also giving you useful details for your better life in this era. So now let us teach you the relaxing pattern here is your body and mind will likely be pleased when you are finished reading through it, like winning a game. Do you want to try this extraordinary wasting spare time activity?

Angel Sutton:

In this age globalization it is important to someone to receive information. The information will make you to definitely understand the condition of the world. The health of the world makes the information easier to share. You can find a lot of sources to get information example: internet, newspaper, book, and soon. You will observe that now, a lot of publisher that will print many kinds of book. The particular book that recommended for your requirements is Neutron Stars and Pulsars (Astrophysics and Space Science Library) this book consist a lot of the information of the condition of this world now. That book was represented just how can the world has grown up. The vocabulary styles that writer use for explain it is easy to understand. The actual writer made some research when he makes this book. Here is why this book appropriate all of you.

John Day:

What is your hobby? Have you heard that will question when you got pupils? We believe that that query was given by teacher to the students. Many kinds of hobby, Every person has different hobby. And also you know that little person such as reading or as looking at become their hobby. You need to know that reading is very important and also book as to be the point. Book is important thing to incorporate you knowledge, except your own teacher or lecturer. You see good news or update in relation to something by book. Different categories of books that can you take to be your object. One of them is Neutron Stars and Pulsars

(Astrophysics and Space Science Library).
