## **Astrolabes at Greenwich: A Catalogue of the Astrolabes in the National Maritime Museum**

The astrolabe is one of the most intriguing of all early scientific instruments. Invented by the Greeks, the design and construction of the astrolabe remained largely unchanged for hundreds of years as it passed through the Arabic, Indian, Persian and Medieval European cultures. The astrolabe was the starting-point for the design of many other types of calculating and observing instruments in the Middle Ages and the Renaissance. With 53 astrolabes, the National Maritime Museum at Greenwich houses one of the largest collections in the world. This number presents a fair balance between the Eastern (30) and the Western (23) instruments, with some exceptionally fine highlights in each group. This new textbook provides comprehensive coverage of the key issues multinational corporations (MNCs) in their management of human resources across diverse national boundaries. A student-focused text with strong learning features, the book adopts an integrated approach, covering the theories and practices of international human resource management and setting them in context with numerous reference to news stories and case studies developed from the author's own extensive research.
