Concrete Structures for Wind Turbines (Beton-Kalender Series)

Jürgen Grünberg, Joachim Göhlmann

Concrete Structures for Wind Turbines (Beton-Kalender Series) Jürgen Grünberg, Joachim Göhlmann

The wind energy industry in Germany has an excellent global standing when it comes to the development and construction of wind turbines. Germany currently represents the world's largest market for wind energy. The ongoing development of ever more powerful wind turbines plus additional requirements for the design and construction of their offshore foundation structures exceeds the actual experiences gained so far in the various disciplines concerned.

This book gives a comprehensive overview for planning and structural design analysis of reinforced concrete and pre-stressed concrete wind turbine towers for both, onshore and offshore wind turbines. Wind turbines represent structures subjected to highly dynamic loading patterns. Therefore, for the design of loadbearing structures, fatigue effects - and not just maximum loads - are extremely important, in particular in the connections and joints of concrete and hybrid structures. There multi-axial stress conditions occur which so far are not covered by the design codes. The specific actions, the nonlinear behaviour and modeling for the structural analysis are explained. Design and verification with a focus on fatigue are addressed. The chapter Manufacturing includes hybrid structures, segmental construction of pre-stressed concrete towers and offshore wind turbine foundations.

Selected chapters from the German concrete yearbook are now being published in the new English "Beton-Kalender Series" for the benefit of an international audience.

Since it was founded in 1906, the Ernst & Sohn "Beton-Kalender" has been supporting developments in reinforced and prestressed concrete. The aim was to publish a yearbook to reflect progress in "ferro-concrete" structures until - as the book's first editor, Fritz von Emperger (1862-1942), expressed it - the "tempestuous development" in this form of construction came to an end. However, the "Beton-Kalender" quickly became the chosen work of reference for civil and structural engineers, and apart from the years 1945-1950 has been published annually ever since.

From reader reviews:

Cassandra Martin:

With other case, little folks like to read book Concrete Structures for Wind Turbines (Beton-Kalender Series). You can choose the best book if you appreciate reading a book. Provided that we know about how is important a book Concrete Structures for Wind Turbines (Beton-Kalender Series). You can add understanding and of course you can around the world by a book. Absolutely right, because from book you can understand everything! From your country until foreign or abroad you will find yourself known. About simple thing until wonderful thing you could know that. In this era, we are able to open a book or searching by internet device. It is called e-book. You may use it when you feel bored stiff to go to the library. Let's study.

Roderick Olin:

Now a day folks who Living in the era wherever everything reachable by match the internet and the resources within it can be true or not involve people to be aware of each info they get. How people have to be smart in obtaining any information nowadays? Of course the reply is reading a book. Reading a book can help men and women out of this uncertainty Information mainly this Concrete Structures for Wind Turbines (Beton-Kalender Series) book because this book offers you rich details and knowledge. Of course the details in this book hundred per cent guarantees there is no doubt in it you know.

Jose Higham:

The reserve with title Concrete Structures for Wind Turbines (Beton-Kalender Series) has a lot of information that you can discover it. You can get a lot of gain after read this book. This book exist new information the information that exist in this book represented the condition of the world at this point. That is important to yo7u to learn how the improvement of the world. That book will bring you throughout new era of the glowbal growth. You can read the e-book on your own smart phone, so you can read this anywhere you want.

Rick Fairchild:

In this era globalization it is important to someone to obtain information. The information will make anyone to understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of recommendations to get information example: internet, newspapers, book, and soon. You will see that now, a lot of publisher in which print many kinds of book. Typically the book that recommended for your requirements is Concrete Structures for Wind Turbines (Beton-Kalender Series) this publication consist a lot of the information on the condition of this world now. This book was represented how do the world has grown up. The words styles that writer use to explain it is easy to understand. Typically the writer made some research when he makes this book. Here is why this book appropriate all of you.
